

For the final project, you need to form a small group that has 2-3 people. And you can choose any deep learning related but non-trivial topic.

There will be two presentations, one is the proposal presentation and the other is the final presentation. You will need to demonstrate your work using PPT slides.

You can choose a topic that has already been implemented by other people (e.g. a work from a published paper or the code can be found on the github), in this case, you will need to make some non-trivial improvements based on the original work. So, you need to do a survey of your topic before you work on it.

At the end of this semester, you will need to submit:

1. Your presentation slides in PPT or PDF format.
2. Your code of the project.

You need to compress all the code files and slides into a .zip file with the following name format:

*GroupName\_TopicName\_MemberName1\_MemberName2\_MemberName3.zip*

A group number will be assigned to each group. And each group only needs to submit once on blackboard.

Proposal presentation date: 03/23/2021, 03/26/2021

Final presentation date: TBD

Submission due: TBD

You can find a list of example topics in the attachment.
